Atelier planéto 2010(11)

18/01/2011

stephane.erard@obspm.fr

Contexte national

Atelier OV planéto 2009

4 premières éditions : tour d'horizon des projets nationaux

- Pour l'essentiel des bases de données avec interface web
=> pas d'interopérabilité
- Parfois de gros projets, liés à des missions ou des grands programmes

Conclusion

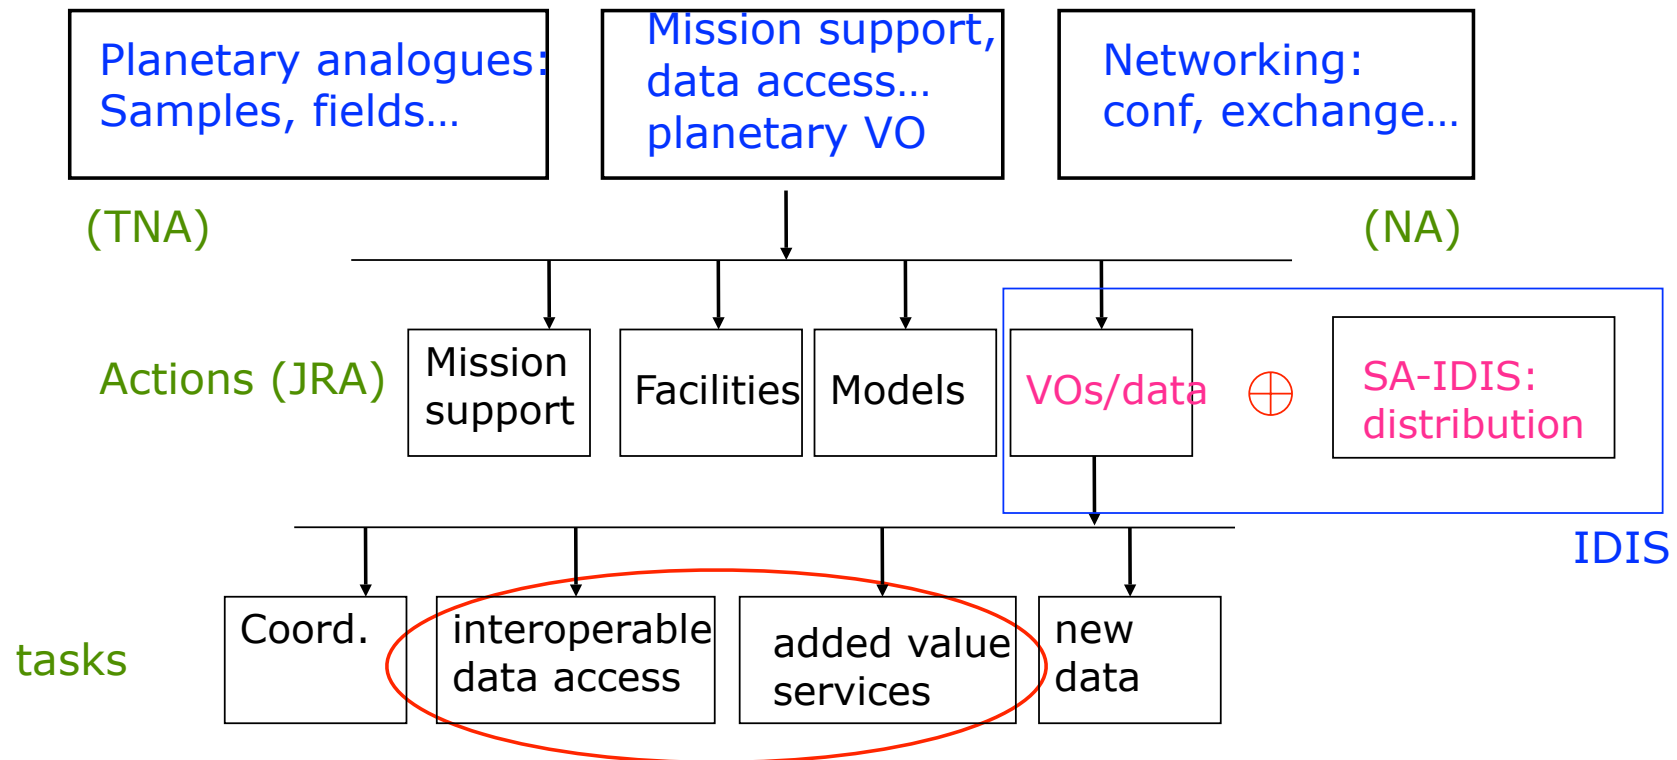

Atelier OV planéto 2010 :

- explicitement dans le cadre Europlanet
- avec une orientation vers le développement des standards
- contributions des fournisseurs de données et utilisateurs potentiels

Les documents seront ensuite proposés comme 1^{re} version des standards Europlanet (General IDIS meeting, fév. 2011)

VO-Paris + Europlanet-RI

Themes/goals

IDIS, activité de service :

- Distribution des bdd développées dans le programme

JRA44, activité de développement :

- Mis en place des bases d'un OV planétologie européen

2009-10, VO-Paris: Functional analysis of IDIS' VO project

Open items addressed in this study:

- Perimeter of data to be accessed
 - + Physical access to the data?
- Mechanisms:
 - Data Access Layer / Access protocol
 - Data Model
 - Metadata exchange format
 - Registries
 - + VO visualization tools: which ones? Interface requirements?

2009-10, VO-Paris: Functional analysis of IDIS' VO project

Open items addressed in this study:

- Perimeter of data to be accessed
+ Physical access to the data?

EuroPlaNet objectives:

- Improve support to planetary space missions
- Set the basis of European planetary science VO

=> *requirement to provide access to PSA (at least)*

+ requirement to provide access to data bases produced by EuroPlaNet activities

+ open, contributive system

2009-10, VO-Paris: Functional analysis of IDIS' VO project

Open items addressed in this study:

- Perimeter of data to be accessed
 - + Physical access to the data?

- Mechanisms:

Data Access Layer / Access protocol

Data Model

Metadata exchange format

Registries

+ VO visualization tools: which ones? Interface requirements?

Existing / natural solutions:

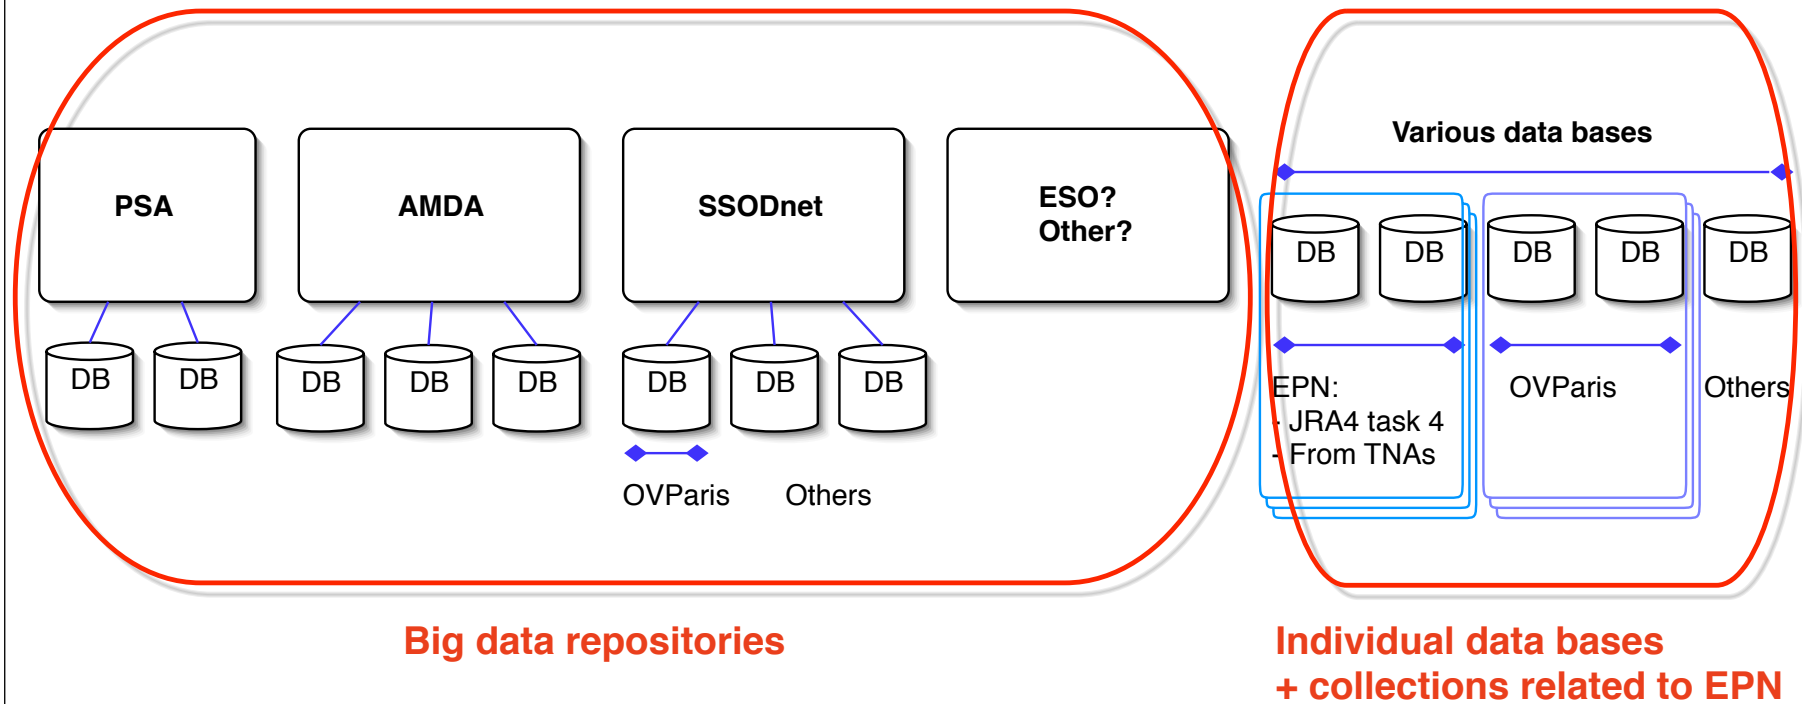

IVOA system

e.g. visualization tools: Aladin, VOSpec, TopCat...

PDAP protocol (IPDA)

1- Scope of IDIS-VO project

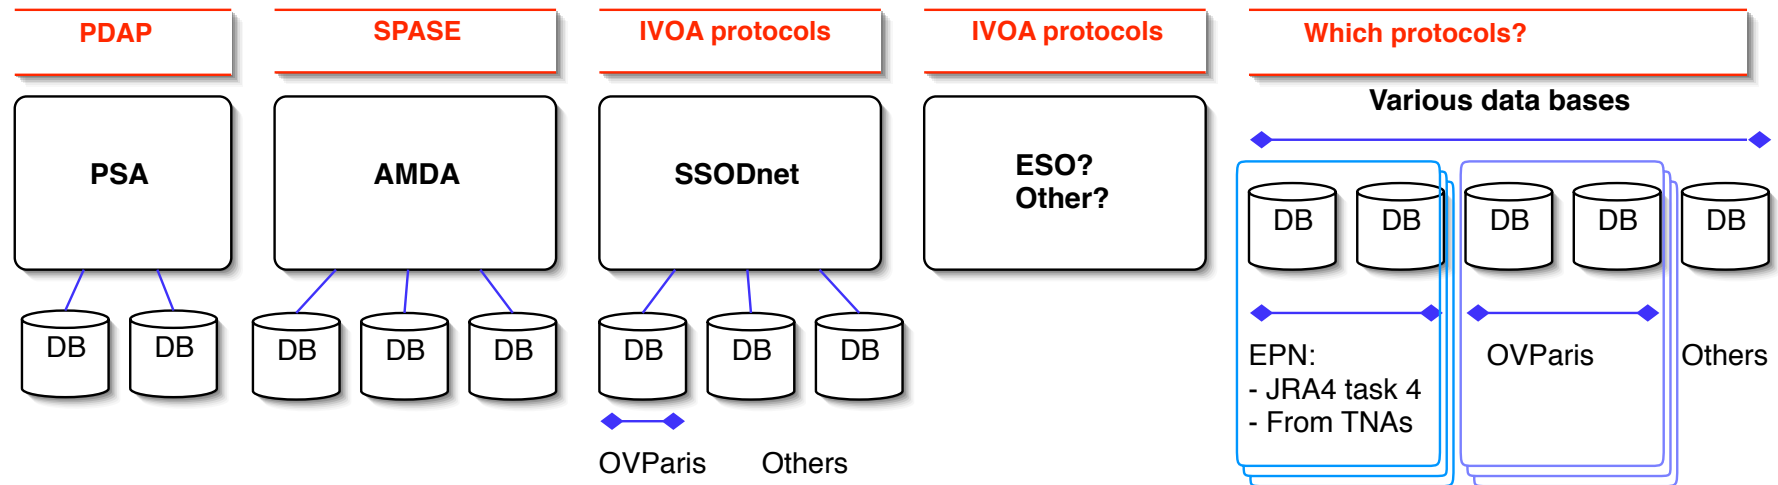

Data to be included/accessible in EuroPlaNet IDIS

2- Individual data access layers

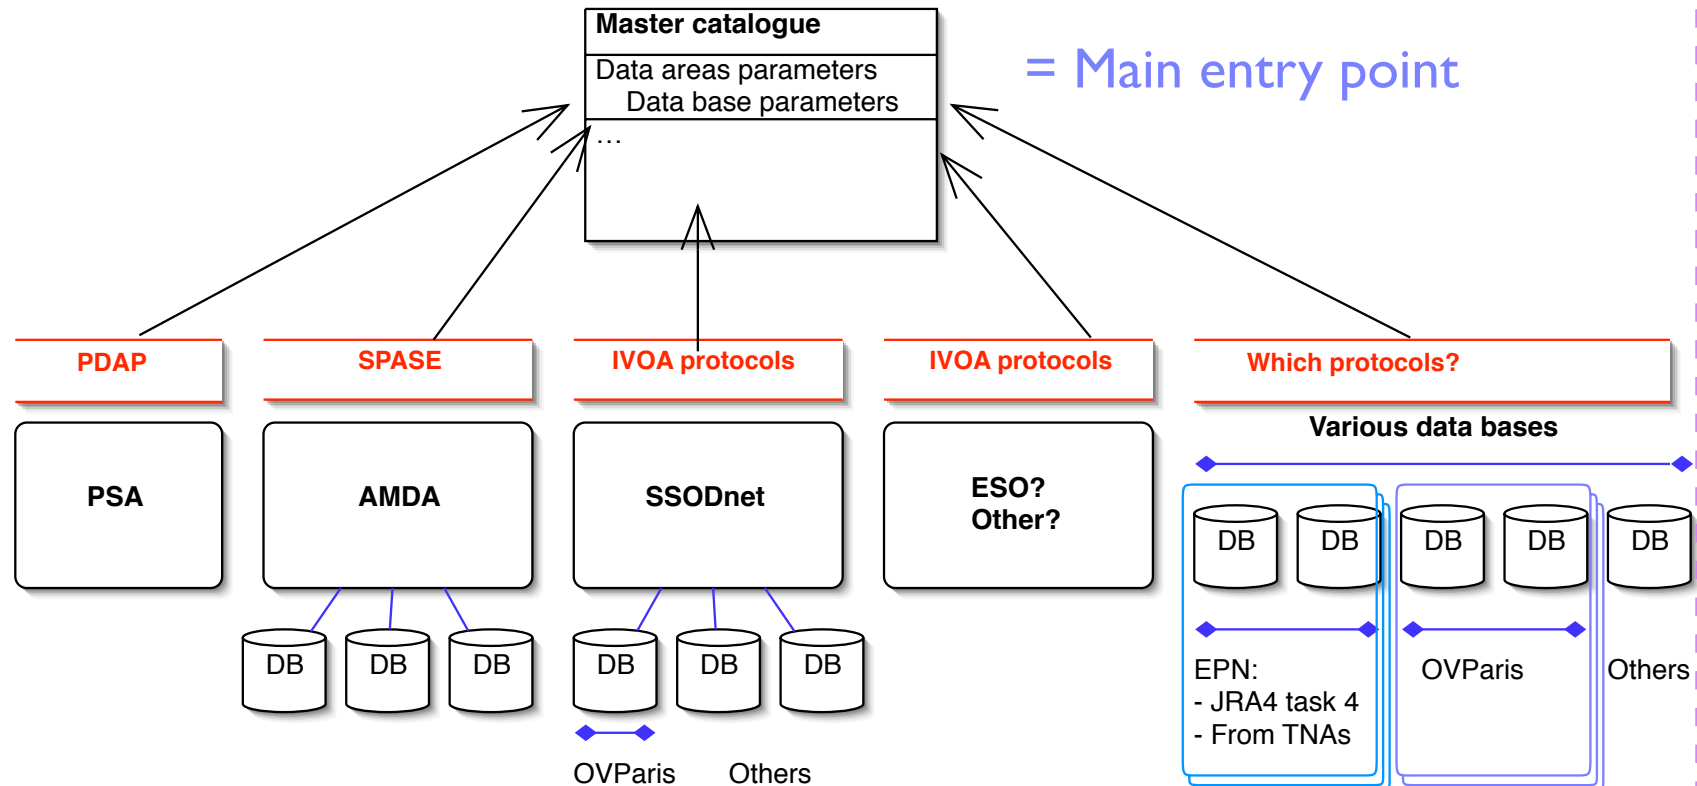

Mechanisms to access the data products
=> IDIS will have to deal with those

Define IDIS standard?

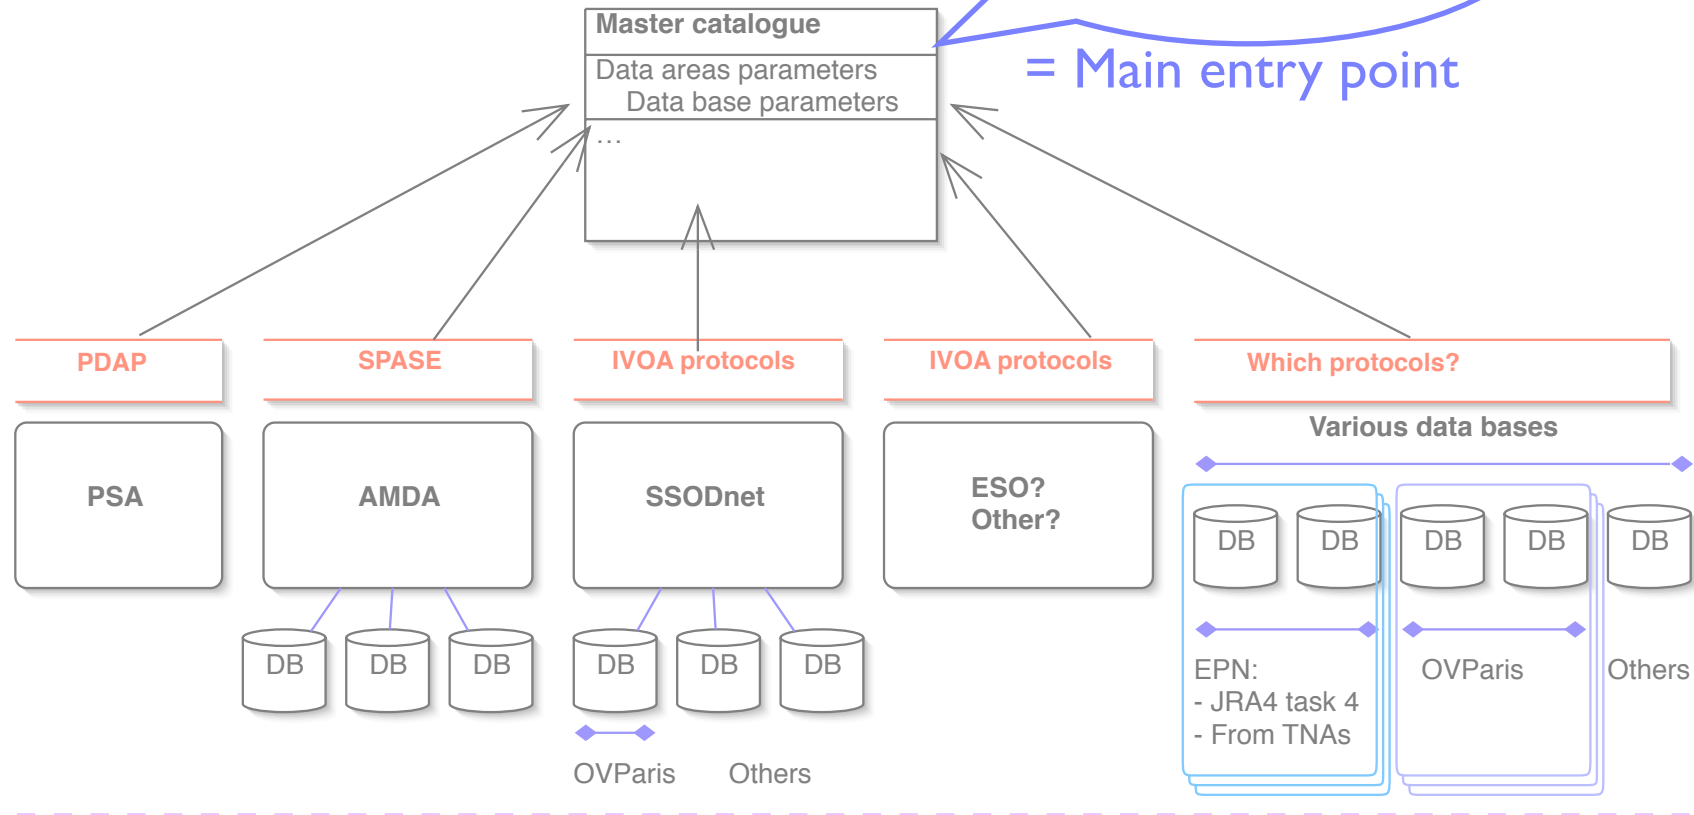

3- Interfaces / catalogue

Internal interfaces

3- Interfaces / catalogue

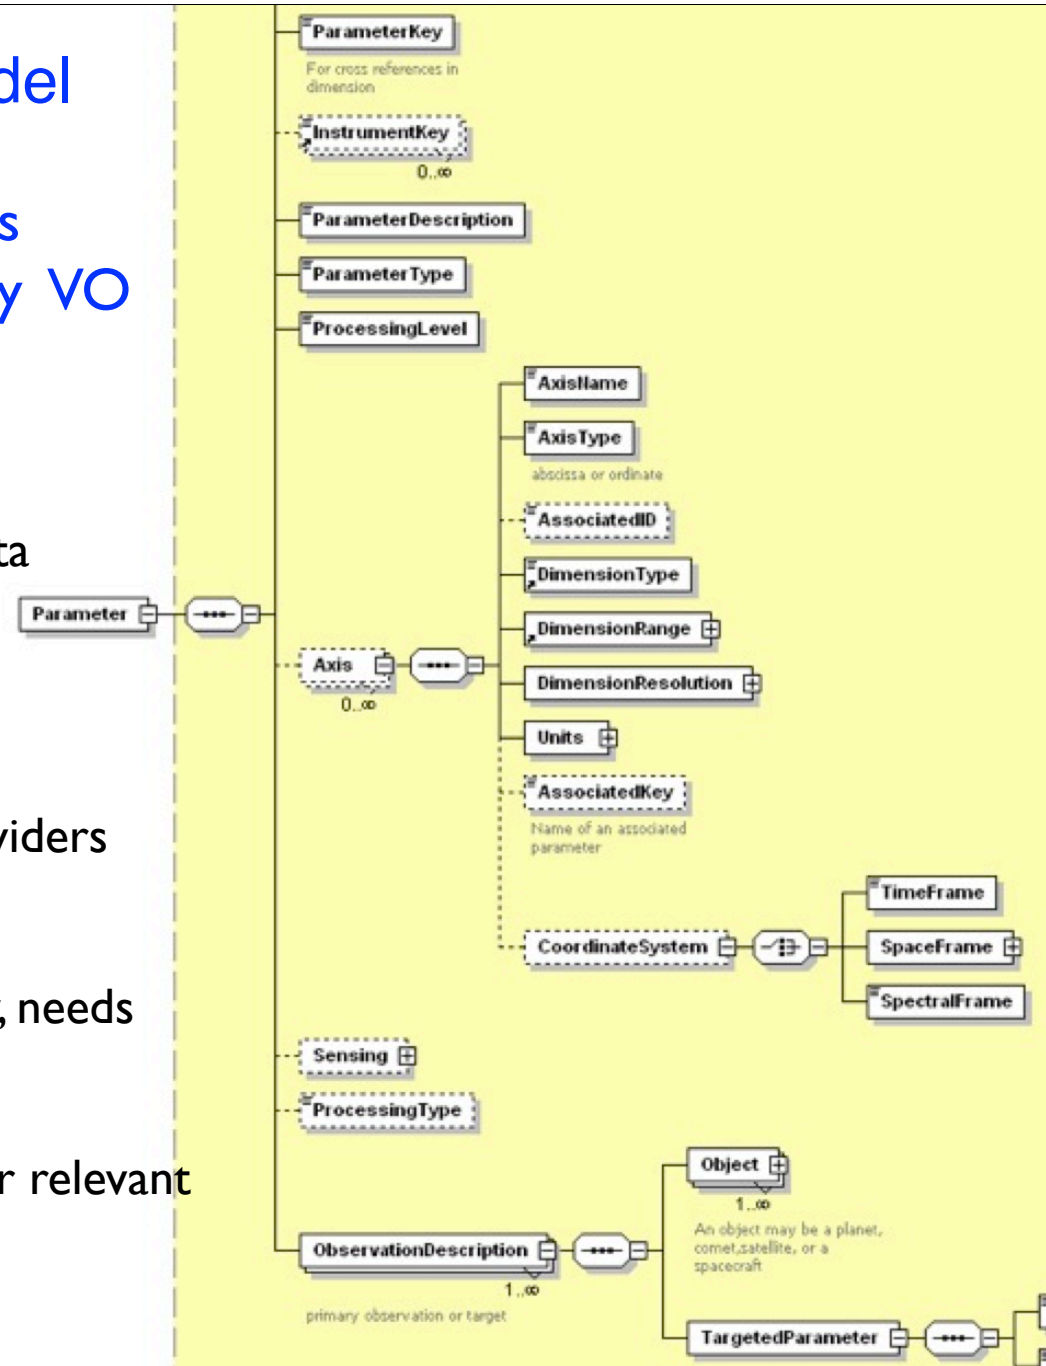

Internal interfaces

4- PDAP-related Data Model

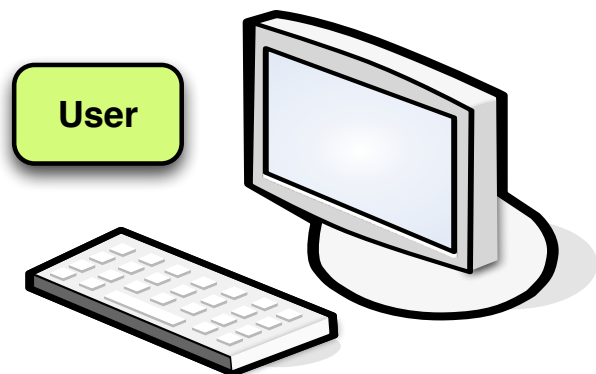

Defines all possible parameters describing data in the planetary VO

- Currently defined for plasma data only (with CDPD)
- Should be interfaced with PDAP
- To be used by external data providers to integrate their data in IDIS
- Built from PDS/PDAP dictionary, needs extensions.
- Stick to IAU standards whenever relevant

To be developed / discussed today

- Global architecture
 - => "Proposed architecture for EPN-IDIS VO"
- Data Access Layer (access protocol)
 - TAP (IVOA std)
 - PDAP (IPDA + IDIS assessment)
 - => "Proposed extensions for PDAP for planetary science"
- Registry / catalogue?
- Data model for Planetary Science?
 - => "Proposed DM for EPN-IDIS"
 - Start from current IDIS drafts
 - Include data providers/users requirements & wishes
 - Indicate science priorities
 - To be submitted to IDIS General Meeting (Feb 2011)
